I understand that the Punjab Engineering College, Chandigarh, is going to publish shortly a photographic Souvenir for the outgoing students of this year. I am sure it is a very useful venture on the part of the College. The Souvenir will keep all the students, wherever they are, think of their alma mater and their contemporary students. The Souvenir will also introduce the students to the various industries, organisations and prospective employers. That will enable them to obtain suitable employment in engineering firms.

I congratulate the College on the venture.

Message

It is a great pleasure that another batch of students has completed their course and are going out of this college. They are going to enter into a new phase of their life and they should aspire to become good engineers. What we need today is creative engineers—engineers who are able to face difficulties and forge ahead.

The Fourth Five Year Plan provides wide scope for technical entrepreneurs. We hope that the "Entrepreneurial Training Programme" which we are going to start with the help of Government of India, will provide new scope for our students in small scale and village industries. But we wish that only persons who have the ability, energy and aptitude for entrepreneurial activity should explore the avenues.

We are sure that all the young engineers will soon find gainful jobs. My advice to you is that wherever you go, you must be your best and do your best. You are going to be the leaders of tomorrow. Accept this challenge and decide that you will make the life of people in our country happier, richer and nobler.

I wish the outgoing graduates all success in their future career.

FROM THE OFFICER-IN-CHARGE

PROF. O. P. PURI
Officer-in-charge PEC MAG

An engineer represents the creative faculty of Nature in human sphere of activity. Like Nature he creates, sustains and maintains various systems of utility. Dams, bridges, power plants, rockets, space vehicles are only a few of the examples of his creative activity. But an engineer, on account of his freedom of action or otherwise may also be sometimes unlike Nature. He may, like Nature, design and create systems which unleash enormous forces of destruction but unlike Nature he may use these systems for self annihilation. Atom Bombs, I.C.B.Ms., Nerve gases and Germ war-fare devices are examples of this wayward stride of a misguided engineer. Normal thing for an engineer is to be like Nature. Let him be close to his Source by designing, fabricating and manufacturing devices which increase the quantum of joy in life. His actions should make our planet a much better place to live.

With this aim, let our young graduating engineers go out in the wide field of action. In action lies our solace and in inaction the seeds of our destruction. An engineer who takes pride in his soiled clothes and greasy hands after action understands Nature better than a self-styled white collar engineer of no activity. Let our young men derive the joy and pride that comes out of hard, honest, down to earth action. To begin with, this is a difficult task but at the end the action is amply rewarded by the accompanying mental joy and material prosperity. The Upanishads tell us the same truth. Follow *Shreya* the path of honest, hard work and do not be lured by *Preya*—the apparently glittering easy path of inaction or wrong action.

Editorial

Mankind shall have to choose, sooner or later, between the present mode of industrial progress and a healthy physical, mental and social life. Modern industrial society achieves its considerable technical performance by massive organisation—and by imposing the needs and values of organisation upon the society. It persuades the public to accept its goals and its work disciplines. It persuades the public to accept its products—to accept the need to maximise income and consumption in accordance with its persuation. With every fresh elaboration of the social organisation the individual finds himself yet further degraded from manhood towards the more embodiment of a social function. The mechanisation of leisure and amusement, at the expense of thought and creation, is spreading an intense boredom throughout the whole mass of civilisation, leading man to a slow death.

The problem of environment, also, stands too clear to be wished away. This is not a cosmetic problem -one that better control of industrial affluent or better design of the internal combustion engine will solve. It is not a technical fault of the system. But it is inherent in industrial growth and thus in industrial purpose.

We should do well to think about these problems, young as we enter upon the world.

COMMENTATOR'S NOTE

Comments in this Souvenir are not to be regarded as any manner of strict descriptions of character or personality which it can be no business of ours to record. What we do present here are 'instant' comments, without any attempt at dry abstractions. A pretty scandalous way, this, some of us would think, of going about our business. Frankly, it is. For what mirth or memoir should in future we have out of anything except the talk—the wild talk ? The Souvenir, then, pictures the students as they posed away in clubs and corridors, in fun and festivities. It is a facile commentary, partly fact and partly fiction, not to be suffered a reading except in a thoroughly good humour.

My thanks are due to all the members of the Souvenir Board of Commentators and the Editorial Board who helped in preparing this Souvenir. I am particularly grateful to Sarvshri T. D. Prasad, Hardeep Singh Ahluwalia, Ashok Jain, S. P. Singh, B. K. Gupta, R. S. Parmanand and R. P. Abrol, who went about their work with becoming readiness.

PLEDGE

(Below is given the pledge taken by every final year student before leaving the College—Editors)

As an engineer, I shall participate in none but honest enterprise and I shall give the utmost of my performance in response to the call of duty. I shall strive to preserve the good name of any engineer whom I know to be conscientious but I shall not hesitate to expose anyone who indulges in practices contrary to the national interest.

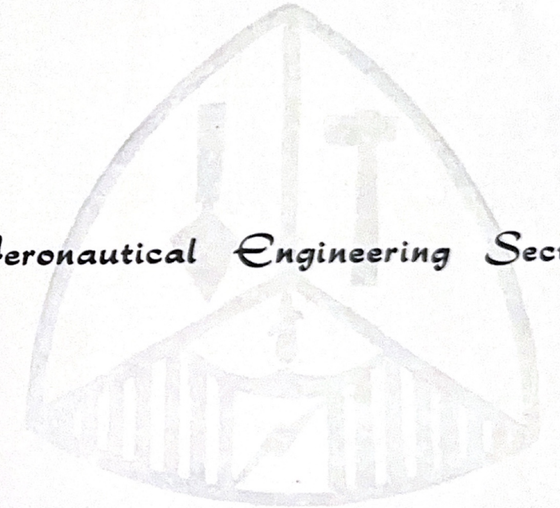

To my fellows, I pledge in the same full measure I ask of them, integrity and fair dealing, respect and tolerance, and spirited devotion to the dignity and standards of our profession.

To my countrymen, I pledge dedicated service, irrespective of race, caste, colour or community and I shall endeavour to uphold the secular tradition of India.

To my country, I pledge I shall serve her with the best in me and I shall try to enhance her reputation, dignity and pride.

To my Alma-mater, I pledge that I shall uphold its name and dedicate my life to the service of humanity.

A human being is not, in any proper sense, a human being till he is educated. However, mere possession of education through college books in the form of University robes or colours is not enough as at times people are tempted to use this so-called education or knowledge for polished cheating and cleverness. True education does not teach a man to show cleverness. "Cleverness is not wisdom". The cleverer you are the less is your education This mere little bookish knowledge is indeed no knowledge when compared with the real knowledge which leads a man to know the bliss of the Atman. True education leads a person to search for truth and light. It gives immense inner happiness, joy, wonderful health, power to meditate and to give delight and light to others who are in need of it.

A falsely educated man neither knows high principles of life nor feels any pricks of conscience. He only recognises his comforts and coins. In chapter 9 of the Bhagwat Gita, Lord Krishna has given the following message.

"Maya makes all things; what moves, what is unmoving,
O Son of Kunti, that is why the world spins,
Turning its wheel through birth
And through destruction,
Pools pass blindly by the place of my dwelling,
Here in the human form and of my majesty,
They know nothing at all.
Who am the lord, their soul,
Vain is their hope, and in vain their labour, their knowledge,
All their understanding is but bewilderment
Their nature has fallen into the madness of the friends and monsters.
Great in soul and they who become what is Godlike,
They alone know me, the origin, the deathless,
They offer me the homage of an unwavering mind.

So to have real education we have to study the lives of great men and have to follow on their footprints. Remember the few lines of Longfellow and commit them to memory:—

"Lives of great men all remind us
We can make our lives sublime,
And departing, leave behind us,
Footprints on the sands of time".

A truly educated person is measured not by his University robes or colours, but his character and dealing with others, so the aim of one's education should be:—

"Character is my degree,
Life is my examination,
Universe is my University".

and this is only possible when a person has a clean conscience like the chapter of an open book which can be read by anybody, any time, and which gives the same meaning and interpretation at all times. John Wesley has rightly said "Cleanliness is next to Godliness". A French saying also conveys the same meaning, "There is no pillow so soft as a clear conscience.

So I would advise my young friends to ponder over these few words and not only make their own lives richer, but also the lives of others by giving them light—thus fulfilling the aim of human birth and high principles of life. "Mother-India expects every son and every daughter to do their duties well".

Message

With the increasing tempo of construction, the Civil Engineers have a very bright future to look upto without having to look back in despair.

Young friends you are going to embark on a challenging phase of your life and I reassure you that there is nothing that you won't be able to achieve with hard work, dedication and perseverance. Face the future as a challenge and God will be with you.

Electronics Engineering Section

Message

It has now been recognised by the Government of India that intensive promotional effort relating to production, development and research in electronics is essential for the rapid growth of self confidence and of indigenous capabilities. With this in view an Electronics Commission with full and financial powers has been set up. This augurs well for our future engineers. With the acceleration of development and research activity vast opportunities will be available to the electronics engineers to show their talent.

In the department of Electronics & Electrical Communication we have been consistently working in this direction. The students are given all the possible facilities in the laboratories to develop the instruments of their choice. There has been a steady improvement in quality. This year the papers written on two of the projects were read and discussed in the Technical Session of Institution of Engineers (India) held at Chandigarh. I am sure this will give ample encouragement to the students and they will come up with better work in future.

I would advise the boys not to hanker after jobs. They should try to set up their own concerns with the finances made available to them by the Government. The future of our country lies in this.

I must congratulate you—the out-going batch of students—after completion of your B.Sc. Engineering Degree studies.
